Question No : 1 / 1

for both instances.

Create Target Group:

- Make a target group named "servertargets".
- Add both instances to the target group.

Set Up Application Load Balancer (ALB):

- Create an ALB named "serverelb".
- Configure it to listen on HTTP (Port: 80).

Assign the "servertargets" target group to the ALB.

Specifications:

Region: Oregon (us-west-2)

EC2 Instances:

- Name Tag: "serverinstance1" in us-west-2a and "serverinstance2" in us-west-2b
- Security Group: Allow HTTP (Port: 80) traffic

Target Group:

- Name: "servertargets"
- Targets: Both EC2 instances

Application Load Balancer:

- Name: "serverelb"
- Target Group: "servertargets"

To start the test, Click the below AWS account link. Copy and Paste the given User Name and Password.

Anomaly mitigation: Not applicable

Deregister

Register targets

Target groups route requests to individual registered targets using the protocol and port number specified. Health checks are performed on all registered targets according to the target group's health check settings. Anomaly detection is automatically applied to HTTP/HTTPS target groups with at least 3 healthy targets.

Listeners and rules (1)

Manage rules

Manage listener

Add listener

A listener checks for connection requests on its configured protocol and port. Traffic received by the listener is routed according to the default action and any additional rules.
