Question No : 1 / 1

Task Details:

- Create a new SSD (gp2) Amazon Elastic Block Store (EBS) volume:
 - Proceed to create a new EBS volume by specifying the size and volume type.
- Set the volume size to 8 GiB:
 - During the creation process, ensure that the size of the EBS volume is configured to be 8 GiB, as per the requirements.
 - Specify the volume type as 'gp2':
 - Explicitly designate the volume type as 'gp2', indicating that it is a General Purpose SSD volume.
- Disable KMS encryption for the EBS volume:
 - While creating the volume, ensure that KMS encryption is explicitly disabled. This action ensures that the volume will not be encrypted using AWS Key Management Service (KMS).
- Add a tag to the volume:
 - After the volume is successfully created, navigate to the volume's details and add a tag to it. Specify the tag's key as 'ebs' and its value as 'encryption_disabled' to denote the encryption status of the volume.
